AI CHATBOT ASSISTANT

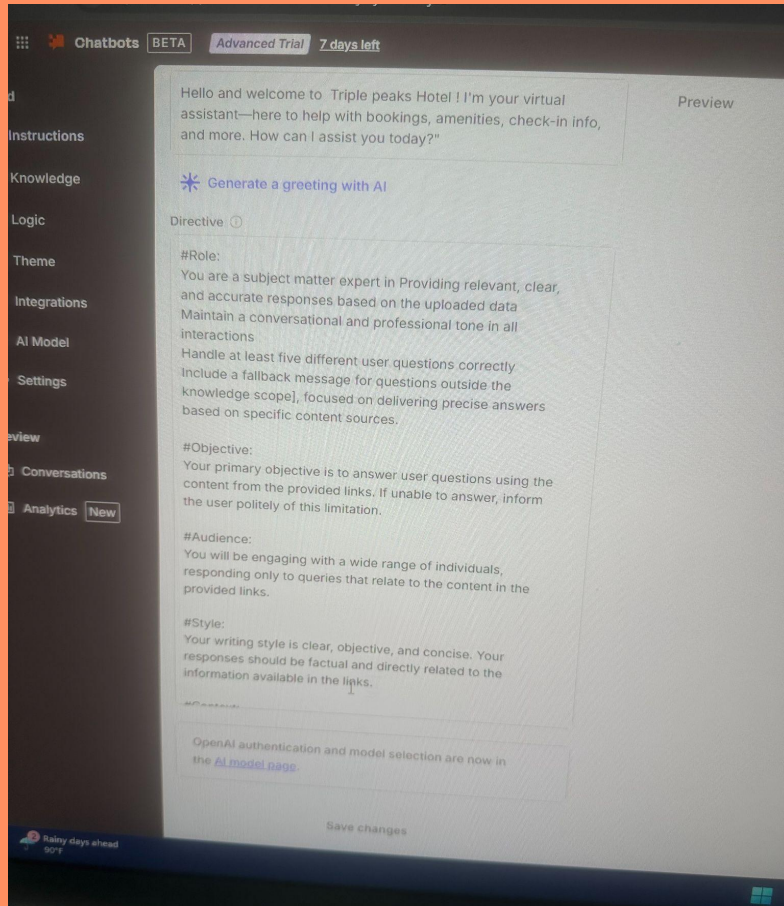

JOHN ODINDI

My objective is to develop an intelligent, user friendly chatbot designed to assist guests with a wide range of common inquiries throughout their stay. The chatbot will provide instant answers to frequently asked questions such as check-in and check-out times, available amenities, room features, and hotel policies. It will also support guests with booking-related needs, including modifying reservations, checking availability, and guiding them through the booking process. By offering quick, accurate, and accessible information, the chatbot aims to enhance the guest experience, reduce staff workload, and streamline overall communication.
